

Microsoft SharePoint requires additional authentication when opening Microsoft Office documents. This feature will prompt the user to choose a digital certificate when trying to open the document. To fix this bug you will need to log out of the website by clicking on your username in the top right hand corner of the screen and selecting 'Sign in as Different User'.

At this screen you will need to re-enter your username and password. **Before clicking the 'Sign In' button you will need to check the 'Sign me in automatically'.** Doing this will cache your credentials in SharePoint allowing you to access Microsoft Office documents without choosing a digital certificate.
